

Computacenter & RSA

Working with Computacenter and RSA, customers can safeguard regulatory compliance and competitive advantage by mitigating security risks with robust identity, access and information management solutions.

Business Challenges:

The impact of an IT security breach can be devastating for organisations in the digital age. A serious incident can not only put customer and corporate data at risk, but also result in business downtime, costly non-compliance penalties, and negative public perception.

The need for robust security must, however, be balanced with productivity by ensuring that staff and stakeholders have fast access to important data and systems. With organisations increasingly adopting flexible and remote working practices, these security measures need to extend beyond the corporate firewall to employees' homes and public networks.

The combination of RSA's best-of-breed security solutions and Computacenter's IT infrastructure services enable customers to:

- Prevent unauthorised access to corporate data and systems
- Avoid costly security or compliance breaches
- Protect competitive advantage and intellectual property
- Simplify information security management to minimise operational costs
- Facilitate secure remote access to enable the adoption of flexible working practices

Key Benefits:

The partnership between Computacenter and RSA enables customers to maintain robust security controls without impacting business agility or staff productivity.

Organisations will also benefit from:

Reduced risk:

Computacenter's proven security expertise and project management skills minimise the risks and disruption associated with IT infrastructure projects.

Lower costs:

Our industrialised IT services are efficient and cost-effective. We provide access to RSA technologies, implementation and support services at a competitive price point.

Simplified security management:

We will help you adopt best practice and repeatable processes to streamline security management, freeing up resources to focus on more strategic activities.

Greater support for innovation:

With improved security controls, Computacenter will facilitate your adoption of cost-effective web-based business models and services, such as cloud computing.

The Security Division of EMC

Partners

Deliverables:

Whether you need to embark on a complete overhaul of your organisation's security infrastructure or implement a specialist solution to meet the needs of a limited user group, Computacenter can help.

Our services and solutions include:

Security Information management:

RSA EnVision helps organisations collate and analyse valuable security metrics, and provides alerts that enable a rapid response to high-risk events and safeguard compliance

Identity and access management:

RSA SecurID ensures only authorised users have access to corporate data and systems. RSA's secure token-based access model provides similar levels of protection for mobile users.

Why Computacenter?

Computacenter has over a decade of experience working with RSA - now a security division of EMC - which means we have the expertise and resources needed to maximise your investment in its technologies.

- Our experts hold sales and technical accreditations for key RSA products
- As a SecureWorld Secure Care Provider, Computacenter is accredited to provide first and second line support for RSA solutions
- Our focus on RSA solutions is continually growing and has delivered double digit growth, year on year, since 2007
- We have developed best practices within our Shared Services Factory to enable customers to benefit from our previous experiences

Consultancy Services

Computacenter's consultancy capabilities cover server, storage, security and networking offering sound technical advice gained from achieving highest level accreditations and practical experience in their field.

Commercial Solutions

Our commercial solutions enable significant cost savings whilst increasing productivity. We do this by assessing the environment and looking where best practice can be implemented in order to drive operational costs down thus improving operating profit. It is not always about buying the cheapest at the time, but looking at the benefit of said solution over a 3-5 year period and comparing it to other options available to make an informed decision.

Proven Expertise

Our experience spans all sectors and includes RSA implementations of all types and sizes. For example, we helped financial services company AEGON empower its sales teams and asset managers with mobile working solutions based on RSA SecurID authentication technology.
